L6: Entry 3 of 10

File: USPT

Sep 3, 2002

DOCUMENT-IDENTIFIER: US 6446109 B2

TITLE: Application computing environment

Detailed Description Text (39):

Application locator 502 is used in one or more embodiments of the invention to locate application program software (e.g., applets). Application software that is not already cached on webtop server 308 is stored on an application server (e.g., application server 310) that is typically located in a central production center. Application locator 502 consults a directory to locate the application server that contains the requested application software. Once the applet is located, download service 504 acquires the application software for storage on webtop server 308.
